

Injector Kings

Drop off at 10040 Cheyenne Ave #170
Las Vegas, NV 89129
702-715-4204

How do I know my fuel injectors need to be cleaned?

- You have over 80,000 miles and use cheap gas
- You have over 120,000 miles and use good gas
- You have a misfire code
- Gas mileage or performance has dropped
- You are getting a tune up
- The tune up you had didn't help your car run better
- Your car starts hard in the morning

Remember, using the mileage criteria above, having your fuel injectors pulled and professionally serviced will pay for itself in 12 months in better gas mileage. Misfires and poor running conditions kill catalytic converters and O2 sensors adding to your costs.

When you had a carburetor, the mechanic cleaned and adjusted it as a part of the tune up. No tune up was complete until the carburetor was gone through. NOW, the fuel injector is the fuel delivery device for your engine. Don't short change yourself and only do a partial job. A tune up cannot fix dirty fuel injectors but dirty fuel injectors will prevent your tune up from making a difference in how your car runs.

After about 20,000 miles, in-car injector cleaning is not effective. Pulling them and having them cleaned in a machine is the only way they will come clean.

Ask us how we can turn your tune up from ordinary to extraordinary!

Do you have poor gas mileage, performance problems or codes?

We can help you get your groove back! Just ask us and we'll make it happen!
